Intended Use of the Product

This product is an active device intended to emit ionizing radiation exclusively for diagnoses purposes in dentistry, and must be operated or handled by qualified personnel only. Such qualified personnel should instruct and/or assist with the patients approach to and from the product. Patients should not be allowed to operate or handle the product. It is always recommended that both operator and patient use the proper protective means for radiographing.

[ 1 ] INTRODUCTION

1. GENERAL

PHOT-X II 303 is an extraoral source dental radiographic x-ray unit. This unit works as a diagnostic purpose x-ray source for human teeth with resultant image recorded on intraoral dental x-ray film or image receptor. This manual provides information for the operation and maintenance procedures and technical specifications for PHOT-X II 303 dental x-ray unit. The instructions contained in this book should be thoroughly read and understood before operation. **PHOT-X II 303 has no user serviceable items. Only qualified dealer service personnel should perform maintenance and repairs.**

2. PARTS IDENTIFICATION OF X-RAY SYSTEM “PHOT-XII 303”
   a. Tube housing assembly : 303-H
   b. X-ray controls : 303-CM (main controller), 303-CS (sub controller)
   c. Cones : 303-R (regular), 303-L (long), 303-REC (rectangular)
   d. Balance arm : 303-A
   e. RK stand : 303-RK

3. COMPLIANCE WITH STANDARD

BELMONT PHOT-XII 303 x-ray unit complies with the following standard.

4. CLASSIFICATION

According to EN60601-1, BELMONT PHOT-XII 303 is classified as follows.
   a. Protection against electric shock : Class I Equipment, Type B Applied Parts
   b. Protection against ingress of water : Ordinary
   c. Mode of operation : Non Continuous
      Max on time 3.2sec.
      Min off time 12sec.
      Duty Cycle = 1 : 50
   d. Equipment not suitable for use in the presence of a flammable anesthetic mixture with air or with oxygen or nitrous oxide.

5. SAFETY

This X-ray Unit may be dangerous to patient and operator, if safe exposure factors and operating instructons are not observed. Only qualified and authorized personnel may operate this equipment observing all laws and regulations concerning protection.
   • The operator must remain minimum 6ft. (2m) away from the X-ray head during exposure.
   • The operator must have means for audio and visual communication with patient.
   • Fully use all radiation safety features of the equipment.
   • Fully use all radiation protection devices, accessories and procedures available to protect the patient and operator from x-ray radiation.
6. SYMBOL
In this book, on the labels or on the control panel of PHOT-X II 303, following symbols are used. Confirm the meanings of each symbol by the table below.

[ 3 ] FUNCTION OF CONTROLS

1 Main Power Switch (Fig.2-1 ~ Fig.2-5)
Pushing the upper side of this switch to the ON position energizes the x-ray unit. (Ready light and pre-select lights for cone type, film or digital, k, mA, and patient size illuminate.)
It is recommended to keep this switch OFF when the unit is not in use, in order to prevent an accidental exposure.

**IMPORTANT : To prevent the risk of an accidental exposure, push the lower side of this switch to the OFF position, when the unit is not in use.**

2 Ready Light (Fig.2-6)
This light illuminates when the line voltage is within operable range (207 ~ 253Vac).
When this light is not on, exposure can not be made.

3 Exposure Time Adjusting Switches (Fig.2-6)
By momentarily pushing the (or ) switch, the exposure time displayed increases (or decreases) by one increment. By keeping the switch depressed more 2 sec., the exposure time displayed increases (or decreases) continuously until the switch is released.
Phot-XII 303 has the following 24 exposure time settings :

- 0.00, 0.01, 0.02, 0.03, 0.04, 0.05, 0.06, 0.08, 0.10, 0.13, 0.16, 0.20, 0.25, 0.32, 0.40
- 0.50, 0.63, 0.80, 1.00, 1.25, 1.60, 2.00, 2.50, 3.20 (sec.)

4 Tooth Selection Switches (T1 ~ T5) (Fig.2-6)
By pushing one of the tooth selection switches, the corresponding tooth light comes on and suitable exposure time is displayed for the selected tooth under the following conditions

- T1 : Incisor of Mandible
- T2 : Incisor of Maxilla, Cuspid & Premolar of Mandible
- T3 : Cuspid & Premolar of Maxilla, Molars of Mandible, Bitewing
- T4 : Molar of Maxilla, Bitewing Molars
- T5 : Occlusal

If the T1 switch is depressed more than 3 sec. unit goes into “Lock Mode”. In lock mode, the only functional switch is the power switch. To exit from the lock mode, depress the T1 switch more than 3 sec. again.

5 Cone Type Selection Switch (Fig.2-6)
Depressing this switch for more than 2 sec. selects the cone type : 8” standard cone or 12” optional long cone. (If the optional rectangular cone is to be used, select the 8” standard cone setting.)

6 Film Speed Selection Switch (Fig.2-6)
a. PHOT-X II 303 has 16 film speed settings. (F.00 ~ F.15)
Two speed settings are pre-set at the factory (a & b) and can be selected with switch

- a = Film speed No. F.09 (equivalent to ISO speed group “D”, or Kodak Ultra-Speed film)
- b = Film speed No. F.05 (equivalent to ISO speed group “F/E”, or Kodak InSight film)
b. Pushing this switch momentarily displays the selected film speed setting in the Exposure Time Display Window
Depressing this switch for more than 2 sec. changes the film type being selected.

-6A-
c. If the Digital Imaging Switch (12) is depressed, both of the film speed indicating lights (a & b) are turned off.

12 Digital Imaging Switch (Fig.2-6)
If a digital imaging system is used, shorter exposure time is often required. PHOT-X II has 16 speeds for digital imaging (d.00 ~ d.15). Pushing this switch momentarily displays the speed being selected in the Exposure Time Display Window (16). With the factory speed setting d.06, the exposure time becomes half of F.06 setting.

| TABLE 1. Speed Setting and Exposure Time (Regular Cone) [unit : sec.] |
|------------------|------------------|------------------|
| Speed Setting    | mA   | Adult | Large Adult |
| F.09             |      |       |         |
| 60               | 4    | 0.16  | 0.16  |
|                  |      | 0.20  | 0.32  |
|                  |      | 0.25  | 0.32  |
|                  |      | 0.25  | 0.40  |
|                  |      | 0.32  | 0.63  |
|                  |      | 0.32  | 0.40  |
|                  |      | 0.40  | 0.50  |
|                  |      | 0.50  | 0.80  |
| 70               | 4    | 0.10  | 0.16  |
|                  |      | 0.25  | 0.25  |
|                  |      | 0.32  | 0.40  |
|                  |      | 0.40  | 0.63  |
|                  |      | 0.50  | 1.00  |
|                  |      | 0.80  | 1.25  |
|                  |      | 1.00  | 1.60  |
|                  |      | 1.25  | 2.00  |
| F.05             |      |       |         |
| 60               | 4    | 0.06  | 0.10  |
|                  |      | 0.08  | 0.16  |
|                  |      | 0.08  | 0.25  |
|                  |      | 0.10  | 0.25  |
|                  |      | 0.13  | 0.25  |
|                  |      | 0.13  | 0.32  |
|                  |      | 0.16  | 0.40  |
|                  |      | 0.20  | 0.63  |
|                  |      | 0.32  | 1.00  |
|                  |      | 0.40  | 1.25  |
|                  |      | 0.50  | 2.00  |
| 70               | 4    | 0.06  | 0.10  |
|                  |      | 0.08  | 0.16  |
|                  |      | 0.08  | 0.25  |
|                  |      | 0.10  | 0.25  |
|                  |      | 0.13  | 0.25  |
|                  |      | 0.13  | 0.32  |
|                  |      | 0.16  | 0.40  |
|                  |      | 0.20  | 0.63  |
|                  |      | 0.32  | 1.00  |
|                  |      | 0.40  | 1.25  |
|                  |      | 0.50  | 2.00  |
| d.06             |      |       |         |
| 70               | 4    | 0.06  | 0.10  |
|                  |      | 0.08  | 0.16  |
|                  |      | 0.08  | 0.25  |
|                  |      | 0.10  | 0.25  |
|                  |      | 0.13  | 0.25  |
|                  |      | 0.13  | 0.32  |
|                  |      | 0.16  | 0.40  |
|                  |      | 0.20  | 0.63  |
|                  |      | 0.32  | 1.00  |
|                  |      | 0.40  | 1.25  |
|                  |      | 0.50  | 2.00  |

13 kV Selection Switch (Fig.2-6)
Momentarily depressing this switch will change the tube potential to 60 or 70 kV. Since the tube potential is constant DC, a 60 kV setting on the PHOT-X II is similar to a 70 kVp setting on a conventional x-ray. If either the Film Speed Switch (11) or Digital Imaging Switch (12) is depressed, 60kV is automatically selected.

14 mA Selection Switch (Fig.2-6)
Momentarily depressing this switch will change the tube current setting (4 or 7 mA). If the Digital Imaging Switch (12) is depressed, 4 mA is automatically selected and if the Film Speed Switch (11) is depressed, 7 mA is automatically selected.

15 Patient Size Selection Switch (Fig.2-6)
This switch alters the selection of patient type/size to be radiographed (Child → Nomal → Obese → Child) and sets the exposure time automatically.

NOTE : Setting or adjusting the exposure time manually (with or switch) supersedes 5 ~ 15 functions.
Exposure Time Display Window (Fig.2-6)
This window displays the selected exposure time. If an abnormal condition exists or a malfunction occurs, an Error Code is displayed. (See Section: [9] ERROR CODES)

Exposure Warning Light (Fig.2-6)
Illumination of this light indicates the unit is producing x-radiation.

Exposure Switch (Fig.2-6)
This switch initiates radiographic exposure. When making an exposure, depress and hold this switch until the Exposure Warning Light and the audible warning shut off. Failure to keep this switch depressed will result in the premature termination of the exposure and an error code E.00 will be displayed in Exposure Time Display Window.

[ 4 ] OPERATING PROCEDURES
1. Turn ON the Main Power Switch.
2. Confirm that Ready Light is illuminated.

NOTE: The ready light will not illuminate unless the incoming line voltage is correct and within the x-ray’s operable range.

3. Select the appropriate tooth type (5 ~ 9), and confirm the pre-selected conditions (cone type, film or digital, kV, mA and patient size) are suitable for exposure.

NOTE: To manually set the exposure time, depress either of the manual Exposure Time Adjusting Switches ( or ) until the desired exposure time appears in the Exposure Time Display Window. While the unit is in manual mode, other selection switches (5 ~ 15) do not affect exposure time. (All of the tooth selection lights are off.) To return to the automatic exposure time selection mode, depress any one of Tooth Selection Switches (5 ~ 9).

4. Set the x-ray head in the position. X-ray head can be rotated 600 degrees horizontally and 300 degree vertically

5. Depress the Exposure Switch. When the Exposure Switch is depressed, the Exposure Warning Light illuminates and the audible warning sounds. Do not release the Exposure Switch until the Exposure Warning Light and audible warning automatically shut off. Failure to keep the switch depressed will result in exposure being terminated prematurely.

6. To continue to radiograph other teeth, just select appropriate Tooth Selection Switches (5 ~ 9).

IMPORTANT: To protect x-ray tubehead from heat accumulation, wait for a time interval that is equal to 50 times the selected exposure time before making additional exposures. (Example: a 25 sec. wait is necessary between exposures that are 0.5 sec. in duration.)

7. Turn OFF the Main Power Switch in order to prevent accidental exposures when the unit is not in use.

NOTE: If the unit left over 8 min. without being operated and the Main Power Switch is kept on, figure “1” runs through the Exposure Time Display Window. This does not mean that malfunction of the unit has occurred; this is an energy saving feature. The unit returns to ready condition by pressing any one of the switches, except the Exposure Switch.
[5] HAND EXPOSURE SWITCH
Hand exposure switch can be connected to the sub controller. Since this exposure switch has a
coiled cord, operators can stand in the most suitable position for operation.
As controller has separate connector for this exposure switch, both exposure switch on the
front panel of sub controller and this hand exposure switch can be used.
If local code prohibits use of both, ask installer to disconnect the connector of either switch.

[6] DIGITAL IMAGING SYSTEM
If electrical instruments such as a digital imaging system is used with PHOT-X II 303 x-ray, the following points should be confirmed to keep electrical safety.

⚠️ CAUTION

The use of ACCESSORY equipment not complying with the equivalent safety requirements
of PHOT-X II 303 may lead to a reduced level of safety of the resulting system.
Consideration relating to the choice shall include:
- use of the accessory in the PATIENT VICINITY
- evidence that the safety certiPcation of the ACCESSORY has been performed in accordance
to the appropriate IEC60601-1 and/or IEC60601-1 harmonized national standard.

[7] CLEANING AND DISINFECTION
In order to ensure proper hygiene and cleaning of the equipment, the following procedures
must be followed:

⚠️ WARNING

Before cleaning the unit, turn off the main power switch and breaker on the blanch line.
This is required because some internal parts remain connected to main voltage even when
the main power switch has been turned off.
Never use the metal corrosive disinfectant, such as povidone iodine or sodium hypochlorite.
Do not pour or spray solvent or liquid directly on the x-ray unit.
Be careful not to allow solvents to run or drip into the x-ray unit.

Limitations on reprocessing: Repeated processing has minimal effect on these instruments. End
of life is normally determined by wear and damage due to use.
Point of use: Remove excess soil with disposable cloth / paper wipe.
Preparation for cleaning: Turn off the main power switch and breaker on the blanch line.
Disassembly is not required.
Cleaning: Wipe the outside surface with a paper towel dampened with a disinfectant solution or
household, non abrasive cleaner.
Disinfection: To ensure proper cleaning of the parts in contact with skin, periodic disinfection
with a non corrosive surface disinfectant is recommended.
Recommended disinfectant: FD333 (Durr Dental GmbH)
Drying: Allow surface to air dry before tuning breaker and main switch back on.

[8] DISPOSAL
1. Disposal of x-ray unit or components
   The tube head of this x-ray unit contains the lead for x-ray shield and oil for the insulation.
   When disposing the x-ray unit or components, appropriately dispose complying with all current
   applicable regulations and local codes. In EU area, EU directive 2002/96/EC on waste electrical
   and electronic equipment (WEEE) is applied on this product. In this directive, environment
   conscious recycling /abandonment is obligated.
2. Disposal of used film and CCD cover
   Dispose of used film covers and CCD sensor covers appropriately, according to procedures
   indicated by each manufacturer and all current applicable regulations and local codes.
If an abnormal condition exists in the unit, or a malfunction occurs, an error code is displayed in the Exposure Time Display Window. Please refer to the Table below.

<table>
<thead>

</tr>
</tbody>
</table>
PHOT-X II 303 x-ray unit requires post installation confirmation and periodic maintenance checks to be performed by dealer service personnel. These procedures ensure that the x-ray unit is functioning within the manufacture’s specifications and remains in compliance with the Standard. It is responsibility of the owner of the unit to see that these maintenance checks are done once a year and that they are performed by a trained, certified service technician. The specific instructions to perform these checks are located within the PHOT-X II 303 Installation Manual.

**[ 10 ] MAINTENANCE**

A. Line voltage confirmation
B. Tube potential and Tube current confirmation
C. Inspection of arm and head movement
D. Mechanical safety
1. The floor mounting plate (FK1/FK2) or base plate (RK) should be checked to confirm that it is securely attached to the floor.
2. The arm mounting bracket should be checked to confirm that it is securely attached to the wall. The arm mounting bracket must be level horizontally and vertically (WK).
3. Check and verify that the horizontal arm is not raising up and out of the arm mounting bracket or pole bushing. This should be verified routinely by treatment room personnel.

1. X-ray tube ----------------------------------- Toshiba D-0711 (Stationary Anode)
   a. Nominal focal spot value ------------------ 0.7 (IEC60336)
   b. Target Material -------------------------- Tungsten
   c. Target angle ----------------------------- 16°
   d. Maximum anode heat content ------------- 7kJ (10kHU)

2. Maximum x-ray tube assembly heat content --- 120kJ (170kHU)

3. Rated peak tube potential ------------------- 60 kV / 70 kV selectable
4. Rated tube current -------------------------- 4 mA / 7 mA selectable
5. Maximum rated peak tube potential ---------- 70 kV

6. Electrical ratings
   a. Rated Line Voltage ------------------------ 230 Vac
   b. Minimum Line Voltage --------------------- 207 Vac
   c. Maximum Line Voltage --------------------- 253 Vac
   d. Rated Line Power ------------------------- 1.5 kVA (Short time rating)
       ------------------------------------------ 30 VA (Long time rating)
   e. Rated Line Current at 70kV,7mA---------- 6.6 Aac
   f. Maximum Line Current at 70kV,7mA------- 7.3 Aac
      (Apparent Resistance ---------------------- 1.02Ω max.)
   g. Range of Line Voltage Regulation -------- 0 ~ 3 %

7. Power line frequency ------------------------ 50Hz, Single Phase
8. Exposure time ------------------------------ 0.01 ~ 3.2 sec.
9. Inherent filtration -------------------------- 1.7 mm Al Equivalent
10. Added filtration ----------------------------- 0.3 mm Al
11. Minimum filtration permanently in useful beam ---- 2.0 mm Al Equivalent at 70 kV
12. Nominal radiation output

   b. tube current------------------------------------ Average of tube current during one exposure
   c. exposure time---------------------------------- Time period during x-ray is emitted

20. Half value layer ---------------------------------- 1.5 mm Al over

21. Source to the base of cone distance -------------- 94 mm

22. Environmental condition for storage -------------- -20 ~ 70°C, 10 ~ 90%, 500 ~ 1060hPa

23. Environmental condition for operation -------------- 10 ~ 40°C, 30 ~ 75%, 700 ~ 1060hPa

24. Rotation angle of head -------------------------------- Horizontal 0 ~ 600°, Vertical 0 ~ 300°

25. Service Life -------------------------------------- 10 Years
[ 12 ] ELECTROMAGNETIC COMPATIBILITY (EMC)

Medical electrical equipment needs special precautions regarding EMC and needs to be installed and put into service according to the EMC information provided in this manual.

Portable and mobile RF communications equipment can affect medical electrical equipment. The equipment or system should not be used adjacent to or stacked with other equipment. If adjacent or stacked use is necessary, the equipment or system should be observed to verify normal operation in the configuration in which it will be used.

NOTE  Uₜ is the a.c. mains voltage prior to applications of the test level.
The PHOT-XⅡ 303 x-ray is intended for use in the electromagnetic environment specified below. The customer or the user of the PHOT-XⅡ 303 x-ray should assure that it is used in such an environment.

### Immunity test

<table>
<thead>
<tr>
<th>Conducted RF</th>
<th>IEC 61000-4-6</th>
<th>Compliance level</th>
<th>Electromagnetic environment - guidance</th>
</tr>
</thead>
<tbody>
<tr>
<td>Portable and mobile RF communications equipment should be used no closer to any part of the PHOT-XⅡ 303 x-ray, including cables, than the recommended separation distance calculated from the equation applications to the Frequency of the transmitter.</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

### Recommended separation distance

\[
d = 1.2\sqrt{P}
\]

Where \( P \) is the maximum output power rating of the transmitter in watts (W) according to the transmitter manufacturer and \( d \) is the recommended separation distance in metres (m).

Field strengths from fixed RF transmitters, as determined by an electromagnetic site survey, should be less than the compliance level in each frequency range. b

Interference may occur in the vicinity of equipment marked with the following symbol:

![Symbol]

**NOTE 1** At 80 MHz and 800 MHz, the higher frequency range applies.

**NOTE 2** These guidelines may not apply in all situations. Electromagnetic propagation is affected by adsorption and reflection from structures, objects and people.

- a Field strengths from fixed transmitters, such as base stations for radio (cellular/cordless) **telephones and land mobile radios**, amateur radio, AM and FM radio broadcast and TV broadcast cannot be predicted theoretically with accuracy. To assess the electromagnetic environment due to fixed RF transmitters, an electromagnetic site survey should be considered. If the measured field strength in the location in which the PHOT-XⅡ 303 x-ray is used exceeds the applicable RF compliance level above, the PHOT-XⅡ 303 x-ray should be observed to verify normal operation. If abnormal performance is observed, additional measures may be necessary, such as reorienting or relocating the PHOT-XⅡ 303 x-ray.

- b Over the frequency range 150 kHz to 80 MHz, field strengths should be less than 3 V/m.

### Essential performance (purpose of IMMUNITY testing)

Unless the exposure switch is pressed, x-ray is not exposed.
The PHOT-XII 303 x-ray is intended for use in an electromagnetic environment in which radiated RF disturbances are controlled. The customer or the user of the PHOT-XII 303 x-ray can help prevent electromagnetic interference by maintaining a minimum distance between portable and mobile RF communications equipment (transmitters) and the PHOT-XII 303 x-ray as recommended below, according to the maximum output power of the communications equipment.

<table>
<thead>
<tr>

</tr>
<tr>
<td>100</td>
<td>12</td>
</tr>
</tbody>
</table>

For transmitters rated at a maximum output power not listed above, the recommended separation distance \( d \) in metres (m) can be estimated using the equation applicable to the frequency of the transmitter, where \( P \) is the maximum output power rating of the transmitter in watts (W) according to the transmitter manufacturer.

NOTE 1 At 80 MHz and 800 MHz, the separation distance for the higher frequency range applies.

NOTE 2 These guidelines may not apply in all situations. Electromagnetic propagation is affected by adsorption and reflection from structures, objects and people.
[ 13 ] LABEL LOCATION

X-RAY CONTROLLER (MAIN)

Type: Dental X-Ray model 303-CN
Model No.: AR-30W56GE

Power input: 200V~50Hz 1.5VA
Power: 1.2VA/1.5VA

WARNING

This X-ray unit may be dangerous to patient and operator unless safe exposure factors and operating instructions are observed.

X-RAY CONTROLLER (SUB)

Type: Dental X-Ray model 303-CN
Model No.: AN-30W56GE

Power input: 200V~50Hz 1.5VA
Power: 1.2VA/1.5VA

WARNING

This X-ray unit may be dangerous to patient and operator unless safe exposure factors and operating instructions are observed.

X-RAY ARM

Type: Dental X-Ray model 303-CN
Model No.: EA11B0000

Power input: 200V~50Hz 1.5VA
Power: 1.2VA/1.5VA

WARNING

Do not move entire X-ray unit with arm extended.

X-RAY LONG CONE

Type: Dental X-Ray model 303-CN
Model No.: EH12B0000

Power input: 200V~50Hz 1.5VA
Power: 1.2VA/1.5VA

X-RAY HEAD

Type: Dental X-Ray model 303-CN
Model No.: EH12B0000

Power input: 200V~50Hz 1.5VA
Power: 1.2VA/1.5VA

X-RAY RECTANGULAR CONE

Type: Dental X-Ray model 303-CN
Model No.: EH12B0000

Power input: 200V~50Hz 1.5VA
Power: 1.2VA/1.5VA

X-RAY ROOM MOUNT

Type: Dental X-Ray model 303-CN
Model No.: EG11B0000

Power input: 200V~50Hz 1.5VA
Power: 1.2VA/1.5VA

X-RAY HORIZONTAL ARM

Type: Dental X-Ray model 303-CN
Model No.: EG11B0000

Power input: 200V~50Hz 1.5VA
Power: 1.2VA/1.5VA
